PROFESSIONAL SUMMARY

Cloud Engineer with a strong foundation in **AWS, Linux, networking**, and **Docker**. Hands-on experience deploying containerized applications using Docker, Nginx, and multi-container architectures. Skilled in **troubleshooting application** and **network connectivity issues**, with a strong interest in cloud infrastructure and DevOps automation.

SKILLS

- **Cloud (AWS):** EC2, S3, IAM, VPC, EBS, Lambda, Elastic Load Balancing, Auto Scaling, CloudFront
- **Networking:** OSI Model, TCP/IP, DNS, HTTP/HTTPS, IP Addressing, Subnets, Route Tables, Internet Gateway, NAT Gateway, Security Groups
- **Operating Systems:** Linux (Ubuntu), Windows, Linux Commands, SSH
- **Containerization:** Docker, Docker Images, Dockerfile, Docker Networking, Docker Compose
- **DevOps & Version Control:** Git, GitHub, CI/CD Fundamentals, Jenkins (Learning)
- **Programming & Database:** Python, Java (Basics), SQL, MySQL
- **Soft Skills:** Problem Solving, Analytical Thinking, Team Collaboration, Good Communication

PROJECTS

Notes Application (Django) – Docker & Nginx Deployment

Technologies: Django, Python, Docker, Nginx, Linux, GitHub

- Built a simple full-stack notes application using **React and Django**, with the source code and setup guide published on GitHub.
- Containerized the application with Docker, building the image and running it as a container with **port 8000** exposed.
- Installed and configured an **Nginx reverse proxy** on Linux to make the application accessible.

Two-Tier Flask Application with MySQL Using Docker

Technologies: Python, Flask, MySQL, Docker, Docker Networking, Linux

- Developed a Python Flask web application that collects user input and stores and retrieves it from a MySQL database.
- Containerized the Flask application and MySQL database in separate Docker containers.
- Configured a dedicated Docker network to enable communication between the application and database containers.

Java Application Using Docker

Technologies: Java, OpenJDK 17, Docker, Dockerfile

- Developed a Java application that displays a greeting with the current date and time.
- Wrote a Dockerfile on an OpenJDK 17 Alpine base image using FROM, WORKDIR, COPY, RUN and CMD.
- Built the Docker image and ran the application in a container, practising container lifecycle management.

EDUCATION

Bachelor of Technology (BTech) – Artificial Intelligence & Data Science **2025**

- Fabtech Technical Campus, College of Engineering & Research, Sangola (DBATU, Lonere) **CGPA: 7.85 / 10**

Diploma – Computer Engineering **2022**

- Shivaji Polytechnic College, Sangola **78.97%**

CERTIFICATIONS

- Python
- SQL
